

Island number sense

12 min: questions 1-8 | 5 min: questions 9-10 | 3 min: check and reflect

Name: _____ Date: _____

01 $2,468 + 1,757 = \underline{\hspace{2cm}}$

02 $5,000 - 2,684 = \underline{\hspace{2cm}}$

03 $36 \times 7 = \underline{\hspace{2cm}}$

04 156 divided by 6 = $\underline{\hspace{2cm}}$ (include any remainder)

05 What is the value of the 6 in 46,218?

06 Round 38,652 to the nearest thousand.

07 $\frac{3}{8} + \frac{2}{8} = \underline{\hspace{2cm}}$

08 Write $\frac{7}{10}$ as a decimal.

09 Nini packs 6 boxes with 24 pencils each. She gives away 35 pencils. How many remain?

10 Kai says $\frac{3}{8} + \frac{2}{8} = \frac{5}{16}$. Explain his mistake.

First try: $\underline{\hspace{2cm}} / 10$ One skill I want to practice: $\underline{\hspace{4cm}}$

Day 1: check and learn

Island number sense

01. 4,225

Add by place value. Check: $4,225 - 1,757 = 2,468$.

02. 2,316

Check with addition: $2,316 + 2,684 = 5,000$.

03. 252

$36 \times 7 = 252$. Use partial products or an area model.

04. 26

$6 \times 26 = 156$. The remainder is zero.

05. 6,000

The 6 is in the thousands place.

06. 39,000

The hundreds digit is 6, so round up.

07. $\frac{5}{8}$

Combine 3 eighths and 2 eighths. The parts stay eighths.

08. 0.7

Seven tenths is 0.7.

09. 109 pencils

$6 \times 24 = 144$; $144 - 35 = 109$.

10. The answer is $\frac{5}{8}$.

The pieces are still eighths. Add the numerators, not the denominators.

Try one missed problem again. Explain what you changed.
