

Island number sense

12 min: questions 1-8 | 5 min: questions 9-10 | 3 min: check and reflect

Name: _____ Date: _____

01 $248 \times 36 = \underline{\hspace{2cm}}$

02 864 divided by 24 = $\underline{\hspace{2cm}}$ (include any remainder)

03 $4.75 + 2.6 = \underline{\hspace{2cm}}$

04 $8.4 - 3.75 = \underline{\hspace{2cm}}$

05 Round 6.847 to the nearest hundredth.

06 $\frac{1}{2} + \frac{1}{3} = \underline{\hspace{2cm}}$

07 $\frac{3}{4} \times \frac{2}{3} = \underline{\hspace{2cm}}$

08 Find the volume of a box 5 cm long, 4 cm wide and 3 cm high.

09 Nini buys 3 notebooks at \$2.45 each. She pays \$10. What is her change?

10 Kai says $\frac{1}{2} + \frac{1}{3} = \frac{2}{5}$. Explain why that is wrong.

First try: $\underline{\hspace{2cm}} / 10$ One skill I want to practice: $\underline{\hspace{4cm}}$

Day 1: check and learn

Island number sense

01. 8,928

$248 \times 36 = 8,928$. Use partial products or an area model.

02. 36

$24 \times 36 = 864$. The remainder is zero.

03. 7.35

Align equal place values: $4.75 + 2.6 = 7.35$.

04. 4.65

Align equal place values: $8.4 - 3.75 = 4.65$.

05. 6.85

The thousandths digit is 7, so round the hundredths up.

06. $\frac{5}{6}$

$\frac{1}{2} = \frac{3}{6}$ and $\frac{1}{3} = \frac{2}{6}$. Add to get $\frac{5}{6}$.

07. $\frac{1}{2}$

Multiply: $\frac{6}{12}$. Simplify to $\frac{1}{2}$.

08. 60 cubic cm

$5 \times 4 \times 3 = 60$ cubic cm.

09. \$2.65

$3 \times 2.45 = 7.35$; $10.00 - 7.35 = 2.65$.

10. The correct sum is $\frac{5}{6}$.

Use equal-sized parts: $\frac{3}{6} + \frac{2}{6} = \frac{5}{6}$. Also, adding a positive amount to $\frac{1}{2}$ cannot give $\frac{2}{5}$, which is smaller than $\frac{1}{2}$.

Try one missed problem again. Explain what you changed.
